

comments, setting common CSS properties in the global level, and use of consistent naming convention for classes & ids forms a pattern, and the resulting CSS code is easy to maintain and scale.

CSS Reset

Browsers have varying default values for properties like margins, line heights, font sizes for different headings (h1, h2, etc), list items styles, etc.

This makes it hard to guarantee consistent UIs across different browsers.

CSS reset is a set of CSS rules that remove these default browser styles, so that you, the developer, can start implementing your design from scratch without worrying about how your site will look on different browsers.

There are a couple of CSS reset styles available on the internet. Below are some examples:

- <https://piccalil.li/blog/a-more-modern-css-reset/>
- <https://meyerweb.com/eric/tools/css/reset/>
- <https://necolas.github.io/normalize.css/>
